Support and contact info

AI chat bot

How everything would work

- With the dropdown menu you can hover over a desired dessert and it would drop down its ingredients, cook time,. And a photo of how it looks

- There will be an AI chat feature which can help anyone with questions and to help pair recipes together if you want to cook more than one thing at a time

- The voice commands can help with the recipe and to let it read it to you with commands like forward, back, and pause.
